

Clinical rotation in small animals (dog & cat (& exotics))

COORDINATOR:

Dr. Sofie Bhatti DVM, PhD
Department of Medicine & Clinical Biology of Small Animals

PERIOD:

13 weeks in the 1st semester (September - December) OR
13 weeks in the 2nd semester (February - May)

PROGRAMME:

Clinical training (clinics)

Depending on the period (1st or 2nd semester), some variation in the programme is possible!

Hospitalisation / Intensive care unit: 2 weeks

Internal Medicine: 1 week

Surgery: 1 week

Anaesthesiology: 1 week

Medical Imaging: 1 week

Clinical nutrition: 1 week

Cardiology: 1 week

Pathology: 1 week

Combination clinic: Dermatology, Ophthalmology, Ethology: 1 week

Neurology: 1 week

Exotic animals (birds, small mammals, reptiles and fish): 1 week

Orthopedics: 1 week

A specific programme of practical exercises will be provided. This may include:

- Surgery
- Practical training suture techniques
- Practical training gastro intestinal surgery
- Practical training urogenital surgery
- Ovari(oyster)ectomies / castration of feral cats
- Practical training splints and casts

Case discussions

At the end of the clinical training week 'internal medicine' the student should prepare and present a clinical case.

Between 8 and 9 am during the clinical training week 'medical imaging', case discussions will take place (min 3-4 days/week).
